Technical and optical modifications as well as misprints reserved

Version: XRCISE STRESS ECHO MED-20150907-en
Printed in Germany
Dear customer,

Thank you for purchasing an cardiowise training device. You are now the owner of a state-of-the-art training system that combines highest technical standards with easy-to-use functionality.

This user manual provides information on several models. This means that you may find explanations that do not directly apply to your training device.

This user manual contains important information on how to operate and use your training device. We recommend that you read this user manual carefully before starting with your workout in order to become familiar with your training device quickly and to understand its correct and safe operation.

Should you have any further questions that are not answered in this manual, please contact us. Cardiowise will try to help as quickly as possible.

The cardiowise team can also advice you on compatible ECG equipment.

1 General Information

1.1 XRCISE STRESS ECHO MED at a glance

The multifunctional XRCISE STRESS ECHO MED is the combination of an adjustable examination couch and a tiltable ergometer. It allows for non-invasive cardiological diagnostics and all conventional ultrasonic examinations. The ergometer can be raised and operates with a fully electronic eddy current brake controlled by the software.

The 4-key cockpit of the clearly arranged display can be used to select various loading programs.

The quiet operation, ease of use and the consideration of customer-specific requirements demonstrate cardiowise’s focus: High technical standard, optimum workout environment and precise workout control, combined with user-friendly operation.

However, technology is not the only crucial factor for outstanding workout equipment. The machines must also meet biomechanical and medical requirements; it has to be developed by combining technical and electronic expertise with the latest results in sports medicine.

Our XRCISE STRESS ECHO MED is composed of:

1. adjustable examination table
2. tiltable ergometer

The lifetime of the XRCISE STRESS ECHO MED is 6 years.

A list of compatible external equipment can be obtained from cardiowise.

1.2 General Information on this Manual

Whether you are already familiar with cardiowise workout equipment or whether you have not used our machines yet: This manual gives you important information.

You can easily find the information you are looking for by searching the table of contents. Users who are already familiar with cardiowise equipment might find the Quick Reference helpful. However, if you are an experienced user and only rely on the Quick Reference please make sure that you nevertheless review the safety guidelines.

The manual contains many tips and tricks to help you get familiar with your cardio machine as quickly as possible.

Please always keep the manual at hand to avoid unnecessary and time-consuming calls at the customer service and to quickly fix problems on your own.
1.3 Parts included in the Delivery

Please check if all parts are included in the delivery and inform our sales department immediately of any missing parts.

Please ensure that the following parts are included in your delivery:

1. Examination table with seat, shoulder support, hip support, folding side pad, Paper role holder
2. Ergometer
3. Manual switch
4. Single open-end wrench SW 19
5. One power cord per machine

Please note that the interface cable is not included in the scope of delivery. It must be purchased separately.

1.4 Customer Service

Contact our customer service for troubleshooting services, technical support, spare parts delivery and information.

In case of technical questions and service orders, please call us at:

Head office: Phone: +49 (6331) 2461-87
Fax: +49 (6331) 2461-55

1.5 Disposal

Bei den Geräten handelt es sich um Elektrogeräte nach dem Elektrogesetz. Sie gehören daher nicht in den Hausmüll, sondern müssen über zertifizierte Unternehmen entsorgt werden. Informationen über die zuständigen Stellen erhalten Sie unter:

stiftung elektro-altgeräte register (EAR)
Benno-Strauß-Straße 1
D-90763 Fürth
Phone: +49 (911) 766650
Fax: +49 (911) 766650
Mail: info@stiftung-ear.de
Web: www.stiftung-ear.de

2 Safety Instructions

Please read the following chapter carefully and respect all safety instructions before you start using your workout equipment. Please keep this manual in a safe place in order to pass it over to future owners if you sell your workout device.

For evidence of ownership, please complete the following form:

Model/series: __________________________________
Serial number: __________________________________
Date of purchase: __________________________________

You will need this information in case of warranty.

The following symbols designate important information.

| Caution! | This warning draws the attention to hazards that could result in personal injury or death. |
| Warning! | This warning draws attention to hazards that could result in property damage. |
| Attention! | Attention, Switch off and unplug the machine. |
| Tip! | This hint contains important information and tips to improve operation. |

2.1 What You Need to Know When Using your Workout Equipment

⊗ Carefully read this manual prior to using your product.
⊗ Familiarize yourself with the machine before you start your workout.
⊗ Please consult your physician before you start using the machine and note the contraindications (see Chapter 2.7).
⊗ Before using the machine please perform a proper function test (see chapter 7.3). For safety reasons inspect the machine (loose screws, worned parts) and the power cord for signs of damage before each use. If the machine is damaged do not use it until it is repaired.
⊗ Warning! Do not exceed the maximum user weight of 200 kg.
Do not place any beverages or food on your training machine.

Before each use, check the device, accessories and cables for damage. Discontinue use if the device is damaged. Make sure that the pad in the right foot area - as viewed from the recumbent patient - is intact, since it covers the power supply. Don’t operate the table if the pad is loose or defective.

Check whether all locking pins for the adjusting mechanisms and pads are locked before the patient uses the device.

Tighten the pedals and the pedal cranks after 3 to 5 operating hours. Otherwise there is a risk of injury.

Do not take your feet off the pedals during training.

The machine is only to be used on instruction of a physician and / or a supervisor. The machine must not be used without the presence of a supervisor.

During transport, place connecting lines and other lines on top of the table in order to avoid possible damage due to lose lines. Ensure that the power cords cannot be driven over.

Do not touch the USB port, RS232 port or audio port or the connection for blood pressure measurement or Spo2 measurement during the training.

Do not lean on the control panel.

Lock the adjustable feet before using the table. The table may only be tilted if the adjustable feet are locked, in order to prevent instability and collision of the table top with the adjustable feet levers.

In order to avoid injuries, talk to the patient before adjusting the seat and maintain eye contact with the patient while adjusting the seat.

Adjust the seat, hip support, and the head and shoulder support in order to prevent crushing of the spinal column or other impairments to the patient.

Make sure that third parties do not stand close to moving parts.

Switch off the machine after the workout and disconnect it.

Attention! The following components of the training bike have dangerous nip and pinch points: drive unit, inclined head-rest and bed, improperly adjusted seat and seat post, improperly tightened components. This results in increased risk of injury.

Ensure that the shoulder support is folded up over the full swiveling range. Ensure that there is sufficient clear space beside the table for this purpose. The table may only be operated with the support folded up if the support is folded up completely - past 100°.

For safety reasons, please leave enough space around the machine for the user to move safely and to avoid that bystanders are hurt by moving parts: Seen from the access orientation, maintain a clearance of at least the training space plus 0,6 m. Provide enough space for an emergency disassembly. Adjacent machines may use the same clearance.

Your workout machine is not a toy! Children must be supervised if they are near the equipment. Children cannot always predict possible hazards. Parents or
other supervisors should always be aware of their responsibility because the playful and adventurous nature of children may lead to situations that the workout machine is not intended for.

⊗ Please review the additional safety and operational instructions in this manual

All safety instructions in this manual are based on many years of experience and selfconception.

**Blood pressure module**

⊗ Keep the blood pressure module away from flammable anesthetics, skin cleansers and skin disinfectants: Fire and explosion hazard.

⊗ Do not attach the blood pressure cuff to a limb used for IV infusions. The cuff inflation can block the infusion, causing harm to the patient.

⊗ Before each use, check any cables, tubes and the microphone of the blood pressure for cracks, bends or any other damages. If the module is damaged do not use it until it is repaired.

⊗ Regularly check the microphone. The manufacturer recommends to change the microphone every 12 month.

⊗ Maintenance of the blood pressure module shall only be performed by authorized personell.

⊗ Using third-party parts can cause malfunction and loss of biocompatibility. Only use original parts of SunTech-Medical.

⊗ If you attach the blood pressure cuff for a longer period check the circulation of the respective limb.

⊗ Keep the blood pressure module away from any liquid as well as any condensations. This may result in an electric shock if the device is connected to the mains. If the module accidentally gets wet please send it to the manufacturer for repair.

**SPO₂-Module**

⊗ Do not use this module near any MRT or X-ray devices.

⊗ Keep the SPO₂ module away from flammable gases.

⊗ Check all components of the SPO₂ module (finger clip, cables etc.) for damages. In case of damages do not use the device until it is repaired.

⊗ Keep the SPO₂ module away from any liquid as well as any condensations.

⊗ Nail polish or artificial nails can influence the SPO₂ measurement. Remove nail polish or artificial nails before using the sensors.

⊗ Do not attach the SPO₂ sensor to limbs with blood pressure cuff.

⊗ Taking medicine that changes the blood color, the administration of intravascular dyes or a high concentration of dysfunctional hemoglobin can lead to incorrect results.
Intense light such as OP lamps, bilirubin lighting, fluorescent lamps, infrared heat lamps and direct sun light can lead to incorrect SPO2 results.

Using third-party parts can cause malfunction and loss of biocompatibility. Only use original parts and sensors.

Do not use the device if you suffer from edemas, skin irritations or have an open wound.

2.2 Instructions for Safe Operation

After delivery, make sure that the machine has not been damaged during transport. In case of doubt, contact our customer service and do not start the machine.

Slots and openings on the machine serve as ventilation. Do not cover these openings, because this can cause the components to overheat.

Always check the power cord for damages before starting the machine.

Switch off the machine after the workout and disconnect it.

Set the device up in an open space for easier operation, and in order to reduce possible sources of danger due to tilting and pivoting of the table top and due to the pedal movements.

Connect the protective earth conductors (yellow/green) of the training bike to the grounding point on the bed.

Equipment of the XRCISE STRESS ECHO MED, series are protected against harmful ingress of water and solid objects according to IP21.

For XRCISE STRESS ECHO MED the protection guidelines according to EN 60601-1:2006 apply.

If you connect additional devices to the XRCISE STRESS ECHO MED line you are committed to comply to the system standard EN 60601-1-1.

2.3 How To Avoid Electrical Shocks

Do not use damaged power cords.

Do not unplug by pulling on the cord.

Switch off and unplug the machine before you open it.

If liquid gets inside the machine, unplug the machine immediately and call the customer service.

Do not insert any objects in the ventilation slots. This may cause a short circuit.

Ensure that the power cords cannot be driven over.

Don’t run the supply cable under the machine, neither between the mobile parts
mobile parts or devices of the machine. The insulation could be damaged unconsciously.

⊗ Warning! To avoid electric shocks these devices must only be connected to mains with protective earth conductors.

2.4 Choosing the Right Place of Installation

⊗ The machine can be set up on any level and stable floor. Make sure that it stands firmly on the floor.
⊗ Never put wood, cardboard or similar materials underneath the machine to compensate for unlevel surface. This increases the risk of accident.

2.5 What Needs to be Considered in Case of Repair?

⊗ Electric parts may only be replaced by original parts.
⊗ Repairs must be carried out by a qualified technician only. If you do not have the necessary qualifications, contact cardiowise Service Center. Electrical or mechanical modifications or alterations performed by unauthorize personnel may void the warranty.
⊗ Do not open the drive system and control system. This will void the warranty.

2.6 Things to be Avoided

⊗ Only use the machine for the purposes it was intended for. If you use the cardiowise for other than the intended purpose, you will be charged for all damages resulting from this. In this case any warranty is void!
⊗ Never use the device in a manner other than that described in the user manual. Otherwise damage to the device and even damage to health could result.
⊗ Never use a damaged machine.
⊗ Do not use the machine without electricity.
⊗ Never lean on the machine and do not make inappropriate movements. Otherwise you might fall.
⊗ Don't pull on the pads while transporting the device. (see Chapter 5.1).
⊗ If the training bike has been lowered the adjustment devices may not be used.

Refer to the appendix for a list of the most important safety guidelines. Attach this list near the machine where it is clearly visible. All users of the machine must familiarize themselves with the dangers and safety regulations. The manufacturer will not be liable for personal injury or property damage.
2.7 Contraindications

To avoid overstress of the athlete and subsequent serious diseases of the cardiovascular system the following contraindications must be observed during performance of an endurance training, i.e. if one of the following symptoms is already known before the training is started in no case an endurance training may be performed on the XRCISE STRESS ECHO MED.

Absolute contraindications:
- angina pectoris
- cardiac arrhythmia and/or Decompensated heart failure
- distress respiratory, sense of oppression
- circulatory disorder with rest pain in affected extremeties
- hypertonia (constantly raised blood pressure) (in this case, please contact your doctor)
- coronarsklerosis
- stress pain in your legs when walking less than 100 m
- acute respiratory infections
- feverish infections
- circulatory problems, feeling of dizziness
- nausea, Vomiting
- acute coronary syndrome
- acute myocardial infarction
- symptomatical severe aortic stenosis
- decompensated cardiac insufficiency
- acute ulmonary embolisim
- acute carditis (Myo-, Endo-, Pericarditis)
- acute phlebothrombosis of the upper extremeties
- acute aortic dissection

If the following symptoms occur the training must immediately be stopped to avoid an overstress of the human organism!
- distress respiratory, sense of oppression
- angina pectoris (chestpain in sudden attacks)
- maximum heart rate > 200-age
- nausea, emesis
- circulatory problems
- illness (heavily tiredness, lassitude, feeling of dizziness)
⊗ rapidly decreasing heart rate
⊗ rapidly decreasing/increasing blood pressure
⊗ main artery disease
⊗ moderate cardiac valve diseases
⊗ electrolyte imbalance
⊗ arterial hypertension (RR < 200/110mmHg)
⊗ tachyarrhythmie oder Bradyarrhythmie
⊗ hypertrophic-obstructive cardiomyopathy and other forms of outflow tract obstruction
⊗ advanced AV-blockages
⊗ anemia
⊗ physical and/or mental health problems
⊗ arrhythmias
Chapter 3    Quick Reference
3 Quick Reference

After delivery of your cardio machine, please check if the serial number (see name plate) is identical with the one indicated on the delivery note and if all components listed in chapter 1.3 („Parts included in the delivery“) are included in the delivery.

After the machine has been plugged in and switched on, the software version is displayed. Then the main menu will appear.

The control panel provides the PLUS, MINUS, START, STOP and BP buttons in this order.

The liquid-crystal display (LCD) is illuminated and shows the elapsed training time (min:s), your heart rate, Bloodpressure (BP) systolic and diastolic and the oxygen saturation (SPO₂), the speed range (1/min) the power (Watt).

When starting the workout on the machine, the main menu will always appear first. Hold the PLUS or MINUS button until MANUAL is highlighted and confirm your selection with START. You are now in the manual mode.

In this mode you can select any workout time and choose any workload level. The workout parameters will be displayed.

Press STOP to stop your examination. The workout parameters remain on the display. Press the STOP button again to return to the main menu. The display will also automatically return to the main menu after 2 minutes if no action is carried out.

Please note!
For workouts in Profile mode also using the bloodpressure- and oxygen measurement please read the detailed instructions.
Chapter 4 Intended Use
4 Intended Use

The XRCISE STRESS ECHO MED is a multifunction table composed of an adjustable examination table and a pivoting ergometer. It can be used for non-invasive cardiac diagnostics as well as all conventional ultrasound examinations.

The table is designed for use in clinics, cardiologists' offices, or similar facilities.

The XRCISE STRESS ECHO MED offers a range of adjustment options in order to create suitable examination conditions even for seriously ill patients with positioning problems or after cardiac surgery interventions (bypass and the like).

The table top can be tilted and/or pivoted in 2 directions, allowing it to be used for all conventional ultrasound examinations. Continuous tilting and pivoting is performed via remote control by electric motors.

The ergometer can be raised and offers an special table for mechanical stress echocardiography. It operates with a fully electronic eddy current brake controlled by the software.

The control cockpit lets you select a manually adjustable level as well as 5 predefined profiles and one predefined, adjustable WHO profile.

By connecting peripheral ECG devices, ECG curves can be recorded to match the load levels. The load display at the patient's eye level allows them to control the cadence at all times. The pad which can be flipped down to the side allows for optimal positioning of the ultrasonic probe.

It is approved for persons with a height between 1.40 m and 2.0 m and a maximum body weight of 200 kg.

Notice! Not all ECG devices can be connected to the XRCISE STRESS ECHO MED. A list of compatible external equipment can be obtained from cardiowise, please phone +49 (6331) 24687!

5 Transport and Installation

5.1 Transport

In order to avoid damage, cardiowise machines are transported by ERGO-FIT GmbH & Co. KG directly or by an authorized freight forwarding company. After delivery, packaging will be collected and disposed by ERGO-FIT GmbH & Co. KG. If cardiowise machines are delivered by a freight forwarder, the customer must dispose the packaging himself or may send it back to ERGO-FIT GmbH & Co. KG (transportation costs are on behalf of the customer).

The machines do not have any shipping locks!

Please observe the following in order to move the table to the desired position:

1. Stand at the foot of the device.

   The table may only be moved after the tilt angle of the table top has been moved to zero.

2. Release the foot-activated locks on both sides (Figure 2, a)). Now you can easily roll the device to the position you want. Ensure that you don’t pull on the pads during this process.

3. Push the table to the desired position. Adjust the table to the floor by turning the adjustable feet with an open-ended size 19 wrench. (Figure 2 b).

4. After adjusting the feet, push the foot-activated locks down to lock them (Figure 2, c)). It may be necessary to repeat steps 2-4 in order to achieve optimal positioning of the table.

5.2 Setup Location and Installation

- Make sure that the surface underneath the machine is level and flat.

- Minor unevenness can be compensated by means of the adjustable screw feet. Adjust the leveling screw feet until the machine stands safely. It is mandatory to adjust the levelling foot because it is the machine’s support. (For a detailed description of the leveling feet please see Chapter 5.5, “Components”)

Please note that the adjustable feet at the foot of the table are cushioned with rubber plugs. On rare occasions rubber (e.g. in combination with aggressive cleaning agents) can leave marks and/or cause discoloration of the floor.

- Set up the machine so that power switch and plug can easily be disconnected:
For safety reasons, please leave enough space around the machine for the user to move safely and to avoid that bystanders are hurt by moving parts: Seen from the access orientation, maintain a clearance of at least the training space plus 0.6 m. Provide enough space for an emergency disassembly. Adjacent machines may use the same clearance.

Don’t place the device in the immediate vicinity of devices with a high level of electromagnetic radiation.

5.3 Ambient temperature

The exercise machine must not be used outdoors.

Your cardiowise exercise machine may be used at an ambient temperature of +5°C to +40°C, a relative humidity of 10% to 80% (non-condensing) and an atmospheric pressure of 700 hPa to 1060 hPa without causing any problems. Operating height below 2000 m.

When switched off, the cardiowise machine may be stored at a temperature between -5° to +40° and a relative humidity of 10% to 80% (non-condensing).

5.4 Plugging in

1. Perform a visual inspection of the power cord and the input connector (power entry module) before using the machine. Damaged power cords and connectors need to be replaced immediately.

2. Plug the power cord into the provided mains input module. The plug clicks into place automatically. Plug the other end of the cable into the outlet.

3. Turn your device on using the mains switch. It is located on the frame at the foot of the table. After your exercise machine has been connected to mains and switched on, it automatically carries out an operating check. During this operating check, you will be able to read the software version of the unit on the display. Thereafter the main menu will appear.
4. Check if the display works. If this is not the case, make sure you followed the steps above correctly. In addition, verify if there is electricity in the mains socket. The training bike and the adjustment device control are connected separately. Thus, the adjustment device operates independent from the training bike.

5.4.1 Power supply

Use your exercise machine only with earthed (grounded) power sockets with 230 VAC / 50-60 Hz (see chapter A5). If you have any doubts about the power supply at the setup location, ask your energy provider. Only use commercial 10 ampere automatic circuit breakers (type B tripping characteristic). In the rare event that these automatic circuit breakers should switch off when you switch on your machine, the circuit needs to be fused with 10 A lead fuses or with a different type of tripping fuse (e.g. K-automat). In case of doubt, ask your electrician.

Before connecting your cardiowise Gerätes exercise machine to your power supply system compare the acceptable voltage and frequency on the name plate (next to power entry module) with your local data.

Always connect your machine directly to the power outlet. If its possible do not use extension cables or multioutlet power strips unless they are EN 60601-1 certified.

The motor controller outlet is intended solely for connection of the motor controller and must not be used for other devices, device components, or accessories.

We recommend DC-isolated cables for the connection of external equipment to the XRCISE STRESS ECHO.

5.4.2 Cabling

⊗ Make sure that nobody can step on or stumble across the power cord.
⊗ Do not place any objects on the cord as it might get damaged.
⊗ When transporting the table or changing its position, place all cables on top of the table.
⊗ Set up the machine so that power switch and plug can easily be disconnected
5.5 Potential compensation

To avoid faults or in order to protect against contact voltages between touchable conductive parts of the multifunction table and other devices in the patient environment, the multifunction table should be connected to the clinic's internal potential equalization system via a potential equalization cable. By default, the bed is equipped for potential equalization. The grounding bolt is located beneath the control panel.

Never connect the potential compensation line to the water or gas supply line or any other kind of pipe. Always use the appropriate potential compensation connection only.

6.3.14.3 Connections ......................................................................................... 33
6 Setup

6.1 Switching On

☉ Before switching on your exercise machine, make sure the machine is plugged in.

If you have connected several cardiowise machines to one circuit never switch on multiple machines at the same time. Otherwise technical problems might occur.

☉ Now turn the device on by activating the mains switch on the frame at the foot of the device. The switch must be in position I. If the switch is in position O the machine is switched off.

☉ The illumination of the display shows you immediately if the machine is switched on.

6.2 Switching Off

☉ Switch off your machine by pressing the power switch. The switch must be in position O.

Take care that the switch-on and switch-off intervals don’t fall below a time of 30 sec. Otherwise faults may occur.

6.3 Components
1 Ergometer
2 Table Top
3 Right handle (stabilizes the lateral position)
4 Seat
5 Load display (patient speed/power output range)
6 Hip support
7 Head and shoulder support
8 Left handle (supports examination)
9 Folding pad
10 Control panel
11 Paper roll holder
12 Manual switch for operation of the positioning motors
13 Foot-activated locks
14 Power connection
15 Power switch
16 Control elements, such as locking pins, clamping levers (all yellow)
17 Controlling the adjustment devices
6.3.1 Ergometer

The ergometer on the table is adjustable and can be raised or lowered. In this manner, the XRCISE STRESS ECHO MED can also be used as an examination table.

The ergometer can be adjusted with a locking pin, activated by a handle (mushroom button) on the right at the foot of the table. The ergometer is moved into the training position by pulling briefly on the handle and moving the ergometer up at the same time until it clicks into place.

Pull briefly on the handle again to fold the ergometer down. The ergometer is moved down largely on its own by a gas strut. Ensure that the pedals are not in the way. Engage the ergometer in its final position by applying slight pressure.

6.3.2 Manual switch

The table top can be adjusted via electric motors and two axes in both the longitudinal and transverse directions (respectively by 45°). The manual switch is used to execute one or more tilting movements.

Please proceed as follows:

- Ensure that the tilting mechanism is only used with the hip support in place in order to avoid damage to health.
- The table may only be tilted with the adjustable feet locked, in order to prevent instability and collision of the table top with the adjustable feet levers.
- Ensure a sufficient safety clearance before using the tilting mechanism.

An area with two pushbuttons is located on the front panel of the manual switch for each movement. The symbols indicate the function of the individual keys. The drives are operated as long as the keys are held.
In addition, three additional individual table settings can be programmed and assigned to the P1-P3 keys.

Function with lowered ergometer:

- If the ergometer is lowered, the table top can be tilted by up to 45° around the longitudinal axis.
- The table can easily be converted to a normal examination table if the ergometer is lowered. The seat must be removed to do so, see section 7.1.4 “Seat”. The head/shoulder support can also be flipped up if necessary, see section 7.1.6 “Head and shoulder support”.

After the training bike has been folded down the lateral axis will be locked and cannot be tilted anymore. It is even locked when operated via the remote control.

Function with the ergometer folded up:

- With the ergometer folded up, the table top can be tilted by up to 45° around the transverse axis. Tilting around the longitudinal axis is locked out at this time.
- Combined tilting around the transverse and longitudinal axes is possible: 30° around the transverse axis and 45° around the longitudinal axis.
- Adjusting the tilt around the longitudinal axis is locked out automatically as soon as the tilt angle about the transverse axis exceeds 30°.
- The tilting adjustment about the transverse axis is automatically limited to 30° if the longitudinal axis is already inclined at an angle of more than 3°.

Individual settings can be saved to the P1-P3 keys. To do so, move the table to the desired position. Press the M key and the respective program key at the same time in order to save the selected position. This is confirmed by a short beep.

In order to recall the desired setting, press and hold the desired key. Then the table moves to the corresponding position.
User programmable functions:
⊙ The user programmable functions are only available with the ergometer folded up.

6.3.3 Right handle
The handle position can be adjusted horizontally on the standard rail. It provides additional stabilization of the patient during sideways tilting.

6.3.4 Seat
The seat can be positioned easily via a locking mechanism, with a slight rotation it will be get more easy.

The seat is removed by pulling briefly on the mushroom button and turning the seat out of its holder at the same time.

A positioning motor controlled with the manual switch is used to adjust the horizontal position. The supporting pad is automatically adjusted as well. Please note: In order to avoid injuries, talk to the patient before adjusting the seat and maintain eye contact with the patient while adjusting the seat.

6.3.5 Load display
The display is mounted on a pivoting bracket. This allows it to be swiveled so that the patient can see it.

The icons used on the display (Up and Down arrow) provide feedback to the patients so they know if they have to increase or decrease the pedal frequency:
⊙ Orange light left/Up arrow: Pedal frequency too low
⊙ Orange light right/Down arrow: Pedal frequency too high
⊙ Green lights: Pedal frequency OK
6.3.6 Head and shoulder support

The head and shoulder support is intended to stabilize the patient on the table. The pads provide a high level of comfort.

The support can be adjusted linearly in the horizontal direction in order to adjust it to the patient’s size by loosening the clamping lever. To move the head and shoulder support, lift it slightly. This prevents damage to the table top. Once the support is in the desired position, re-tighten the clamping lever to secure it.

If you don’t need the head and shoulder support or while applying sanitary paper, simply swivel the support up and away from the table top. The bracket with load display is swiveled away at this time.

![Loosening the clamping lever](image1.png)  ![move the head and shoulder support](image2.png)

Ensure that the support is folded up over the full swiveling range. Ensure that there is sufficient clear space beside the table for this purpose. The table may only be operated with the support folded up if the support is folded up completely - past 100°. Otherwise there is a risk of patient injury since the head and shoulder support may flip back down.

6.3.7 Left handle

The handle above the head and shoulder support makes it easier to assume the position for examination with the ultrasonic probe.
6.3.8 Folding pad

Folding the pad down creates an opening in the table top which allows for unrestricted examination with the ultrasonic probe.

Pull the mushroom button on the pad to fold it down. This folds the pad down.

If you don’t need the head and shoulder support or while applying sanitary paper, simply swivel the support up and away from the table top. The bracket with load display is swiveled away at this time. To restore the full table top, pull the pad up by the handle until it clicks into place.

6.3.9 Paper roll holder

For hygienic reasons, it is possible to protect the table top with a paper underlay. A paper roll holder is located under the head of the table top for this purpose. In order to be able to pull the sanitary paper over the table top, loosen the clamping lever on the head and shoulder support, raise it, and pull the sanitary paper through underneath and over the table top. Then re-tighten the clamping lever.

6.3.10 Hip support

The hip support can be adjusted in horizontal and vertical directions.

For vertical adjustment to the patient pull on the trigger (mushroom button) and pull the hip support upwards. After adjusting the support, loose the trigger again.
For horizontal adjustment to the patient in the transverse direction, loosen the clamping lever.

Adjust the hip support manually. After adjusting the support, re-tighten the clamping lever.

To remove the hip support, pull on the trigger (mushroom button) and pull the hip support out.

To install the hip support, slide it into the holder until it clicks into place.

In order to avoid injuries, talk to the patient before adjusting the hip support and maintain eye contact with the patient while adjusting the hip support.

6.3.11 Foot-activated locks
See Chapter 5.1 “Setup”.

6.3.12 Power connection
See Chapter 5.4 „Plugging in“.

6.3.13 Power switch
The mains switch is located on the frame at the left side at the foot of the table.

To turn the table on, toggle the switch to the I position.
To turn the table off, toggle the switch to the 0 position.

6.3.14 The Control Panel
Cardiowise exercise equipment is known for its outstanding ease of use. The XRICSE STRESS ECHO MED is equipped with a user guidance system that is simple and easy to understand.
On the control panel you find a display and several buttons. Before you take a closer look at the control panel please consider the following aspects:

1. Do not lean on the control panel or the display. It may get damaged.
2. Do not exert pressure on the display.
3. Only press the buttons lightly. When you press a button you will hear a beep.
6.3.14.1 The Buttons
Depending on the model you will find the following buttons on the control panel:
PLUS: With this button you can increase the intensity or change parameters.
MINUS: With this button you can decrease the intensity or change parameters.
START: With this button you can confirm workout mode selections or parameter settings.
STOP: With this button you can cancel a function or stop the machine.
BP: Starting the blood pressure measurement.

6.3.14.2 The Display
The XRICSE STRESS ECHO MED is equipped with an LCD-display that consists of a monochrome graphic display. In the section below you will find model-specific information on displays, measuring units and their meanings.

<table>
<thead>
<tr>
<th>Display</th>
<th>Explanation</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>

<td>Current heart rate per minute</td>
<td>1/min</td>
</tr>
</tbody>
</table>

6.3.14.3 Connections
At the back of the control panel of the XRICSE STRESS ECHO you can connect devices to measure the blood pressure or the oxygen saturation (optional). Moreover you will find a USB port.

**SPO₂**
Connect the 9-pin cable to the corresponding connector. To disconnect just pull the plug from the connector.

Please note: For the SPO₂ module only use finger clips that have been accepted by the manufacturer. You can order them at cardiowise.
**Blood pressure**

Connect the cable (microphone and air pressure tube) for blood pressure measurement to the corresponding connectors. When disconnecting the cable consider the following: Disconnect the microphone (round plug) by pressing the small black button at the plug before removing the cable. Disconnect the air pressure tube (hexagonal plug) by pressing the silver bracket before removing the tube.

**USB**

The USB port is needed to update the device software. Format any USB sticks that you want to use for updating the software in order to avoid damages to the operating system.

*Please review the additional safety and operational instructions in this manual!*

7 Operation

7.1 Operation Modes

When you power on the device the first thing you see is the main menu with the following options:

- MANUAL
- PROFILES
- WHO-PROFILES

To return to the main menu press the STOP button once or several times.

*Note! Pacemaker patients are recommended to only use the MANUAL mode!*

7.1.1 MANUAL

In this mode you can choose any workout time and workload.

1. Press PLUS/MINUS until MANUAL is highlighted. Confirm your selection with START.

2. You now access the workout mode. Here you can change the workload by pressing PLUS/MINUS. If you want to change the workload substantially, press and hold PLUS/MINUS. On the TRAC you can also change the incline by pressing UP and DOWN.

3. Stop the workout by pressing the STOP button. The workout parameters (Watt, 1/min etc.) remain on the display and are visually demonstrated in the workout profile. By pressing STOP again you return to the main menu.

In MANUAL mode you select any minimum/maximum workload. The workload limits are as follows (depending on the device):

<table>
<thead>
<tr>
<th>Power Range</th>
<th>Increments</th>
<th>Speed</th>
</tr>
</thead>
<tbody>
<tr>
<td>151 - 600 W</td>
<td>5 W</td>
<td>20 - 120 rpm</td>
</tr>
</tbody>
</table>

*1: Presetting = 25W; can be reduced to 15W by pressing the MINUS button.

Please note that the resistance range below 25 W is not defined in the DIN VDE 750-238 standard!
7.1.2 PROFILES

Choose from five different predefined profiles (60 minutes). The profiles provide different workload sequences, comparable with a hilly landscapes. The five predefined profiles (1 - 5) are:

Profile 1:

![Profile 1 Diagram]

Profile 2:

![Profile 2 Diagram]

Profile 3:

![Profile 3 Diagram]
Please proceed as follows:

1. Press PLUS/MINUS until PROFILES is highlighted. Confirm your selection with START.

2. The PROFILE submenu is displayed. Select a profile by pressing PLUS/MINUS. Confirm your selection with the START button.

3. Now you have to enter the minimum/maximum workload. Press PLUS/MINUS to change the values. If you change the minimum value the system changes the maximum value accordingly. Confirm the workload values with START.

4. Define the maximum operating time. You can select different working times between 10 to 60 minutes (default time 20 minutes) by pressing PLUS/MINUS. Confirm your selection by pressing START.

5. You now access the workout mode. Here you can change the workload by pressing PLUS/MINUS. You can only use values within the previously defined workload range.

6. The workout will stop automatically after the defined workout time has elapsed. You can also stop the training at any moment by pressing the STOP button. In either case the workout parameters (Watt, 1/min etc.) remain on the display and are visually demonstrated in the workout profile. By pressing STOP again you return to the main menu.
7.1.3 WHO-PROFILES

The WHO profiles are step profiles defined by the World Health Organization (profiles with stepping strain increase).

WHO-Profile: stepping strain increase (step profile)
Initial strain: Strain of the first strain level [W]
Time: Duration of each strain step [min]
Strain step: Intensity of each strain step [W]
Recovery: Strain in recovery phase [W]

Please proceed as follows:

1. Push the PLUS/MINUS buttons until the programme WHO-PROFILES is selected. Confirm your choice with the START button.

2. You are now in the WHO PROFILE mode where you can see the settings. Press the START button to start with the WHO PROFILE with preset settings for Time, Load etc. ACTIVE will be shown on the display.

3. If you want to change the settings, select the settings in the WHO PROFILE mode by pressing the STOP button. Then change them by pressing the PLUS/MINUS buttons. Press the STOP button again to activate the WHO PROFILE.

4. Press the STOP button to stop the strain phase and to proceed to the recovery phase (PASSIVE).

5. By pushing the STOP-button one more time, you will return to the main menu.

The automatic strain increase in the preset as well as in the individual WHO profiles can be interrupted during operation by pressing the START button. The displayed information changes from ACTIVE to HOLD. In the HOLD mode, the performance can be modified manually with the PLUS and MINUS buttons. If you want to reactivate the automatic strain increase, press the START button again. The display changes from HOLD to ACTIVE. In both modes, you can change from the strain phase to the recovery phase by pressing the STOP button. The display changes to PASSIVE. This allows the doctor to adjust the strain for his patient more precisely than before.

7.1.4 External Connection

A serial interface (RS232) is standard equipment on the XRCISE STRESS ECHO MED.

Please note! Some ECG devices cannot be connected with the XRCISE STRESS ECHO MED. Call +49 (6331) 246187 for more information.
Control of the ergometer by external devices:
For control by external devices (ECG, PC, etc.), the corresponding data protocol must be selected first. The data protocol is set by the installer. If the initialisation is received through the interface, the XRCISE STRESS ECHO MED automatically changes to the operating mode „external control“ ( „ECG no.“ and the protocol number will be shown in the middle of the display). It is not necessary to select the menu item. In addition, the recognised control characters will be displayed for checking purposes. Unknown commands will be shown as „/“.
Printing is not supported during external control.

If disturbances occur between the ECG device and the bike ergometer, potential compensation can be installed (see Chapter 5.4).

Data protocols:
Use the interface cable to connect the XRCISE STRESS ECHO MED with the external device (ECG, PC etc.). Then the correct data protocol needs to be set:
1. You are in the main menu. Access the service menu by pressing the PLUS and MINUS keys at the same time. Select the „RS232 Interface“ function.
2. Use the PLUS/MINUS keys to select the desired protocol (00, 01, 02,...) and confirm your selection with the START key. The protocol selection is saved for further use. Use the STOP key to return to the main menu at any time.

If the initialisation is received through the interface, the XRCISE STRESS ECHO MED automatically changes to the operating mode „external control“. In addition, the recognised control characters will be displayed for checking purposes. Unknown commands will be shown as „/“.
Printing is not supported during external control.

7.2 Device-Specific Behavior after the Workout
You do not need to observe any special instructions at the end of the workout. Just stop the workout. There is no increased risk due to coasting.

7.3 Functional Test
For a functional test please proceed as follows:

Brakes

- Switch on the device. The display lights up as soon as the machine is ready.
- Select MANUAL mode and increase the power range (see Chapter 7.1.1).
- Move the pedals at the lowest speed (see the arrows!). The resistance increases. Increase the speed range to its maximum. The resistance decreases. If this is the case the rpm-independent operation works fine.
Related Functions

⊗ Make sure that the seat can be adjusted easily.
⊗ Make sure that the Head support can be adjusted easily.
⊗ Make sure that the Hip support can be adjusted easily.

7.4 Default Settings

For changing the default settings, you can use the following buttons:
PLUS: You can navigate in the menu and increase settings
MINUS: You can navigate in the menu and decrease settings
START: You can confirm your selections or settings
STOP: You can cancel a function or leave the menu

Language settings:
In the main menu simultaneously press PLUS and MINUS to open the “Service” menu.
Select the function “Language”. Here you can change the language.

Date and Time settings:
In the main menu simultaneously press PLUS and MINUS to open the “Service” menu.
Select “Time and Date”. Here you can change the settings.

7.5 Blood pressure measurement

With the XRCISE STRESS ECHO MED devices you can perform an ausculatory blood pressure measurement. This is only possible during workout (e.g. manual workout).

The blood pressure module must be correctly connected to the machine (see chapter 6.4.3. Connections). Attach the cuff to the patient’s arm. For correct results please choose the right cuff size. To determine the right size use the lines in the cuff.
The cuff needs direct skin contact, so please take care that no clothes come between cuff and skin. The microphone has to be positioned right on the artery (approximately 2 cm above the elbow, see illustration). Close the cuff and check if its fits firmly and does not move.

Press the BP button on the control panel. The blood pressure cuff will inflate and measurement starts. During measurement keep the arm straight and do not move.

The display will then show systolic (50 to 250 mmHg) and diastolic (20 to 150 mmHg) values as well as the heart rate (20 to 200 BPM). These values will be displayed until the next measurement starts.

Please note:

- Maximum deviation of blood pressure values: +/- 3 mmHG from 0 to 300 mmHg).
- Measurement results on left and right arm may vary.
- If you attach the blood pressure cuff for a longer period check the circulation of the respective limb.

Please review the additional safety and operational instructions in this manual!

7.6 SPO₂ measurement

With the XRCISE STRESS ECHO MED devices you can also measure the oxygen saturation (SPO2). This is only possible during workout (e.g. manual workout).

The SPO2 module must be correctly connected to the machine (see chapter 6.4.3. Connections). Attach the finger clip to forefinger, thumb or little finger. If measurement is needed attach the clip to the big toe.
The patient’s skin on the finger must be dry and clean. Open the clip and put the finger as far as possible into the opening. Release the clip to lock it. Guide the cable along the arm and fasten it with tape, if necessary. Now you can perform the measurement. Do not move the hand during the measurement.

The measurement will now be performed automatically and permanently. The display shows the measurement values (70% to 100%) as well as the heart rate (20 to 300 BPM in whole beats (1 bpm)). These values will be displayed until you remove the finger clip or disconnect the SPO2 module.

Please note:

- With an oxygen saturation between 70% and 100% the maximum deviation of the measurement values is 2,3%.

- The maximum heart rate deviation is +/- 3bpm.

7.7 Heart rate control

Heart rate monitoring devices are tested at our factory before delivery. The displayed heart rate is compared to the corresponding displays of a Polar heart rate monitor. Only certified heart rate monitors and receivers are used for the test.

*Please review the additional safety and operational instructions in this manual!*
Kapitel 8  Maintenance

8.1  Maintenance and Care ................................................................. 46
8.2  Cleaning .................................................................
8 Maintenance

Regular, thorough care and appropriate maintenance in particular help to maintain the value of your exercise machine and to extend its lifetime. For this reason, we recommend regular inspections of the machines. Before every use, inspect the machine for damage. If the machine is damaged, have it repaired immediately. These regular inspections are essential in case of guarantee claims.

A safety technology inspection (STI) and measuring technology inspection (MTK) must be performed every 2 years. In Germany, observe §11 of the Medical Devices Operator Ordinance (MPBetreibV). In order to maintain the validity of your warranty, servicing, the STK, and the MTK must be performed by the cardiowise authorized customer service representative. In Germany, documentation in the medical product book is required. As the table operator, ensure adherence to the applicable local regulations.

The following situations make immediate maintenance necessary:
- excessive mechanical stress (sharp impact, defect cabling, inappropriate tension),
- liquid has entered the device,
- cables, connectors or casing are damaged,
- covers have dropped off or are damaged.

A safety technology inspection and a measuring technology inspection are always required after service/maintenance work on the device. This is followed by a functional test. Only when the safety inspection, the measuring technology inspection and the functional test have been passed can the proper use of the device be assured.

8.1 Maintenance and Care

Cardiowise machines are low-maintenance products. The following chapters outline important inspections and maintenance procedures for different models. You should carry out these tasks regularly.

Switch off and unplug the machine before you perform maintenance tasks or open its casing.

Please note:
- Check the device for possible damage every time before use.
- In particular, the power cord must be checked for possible damage on a regular basis.
- Moving parts need no further oiling or greasing.
Treadle

- As screws tend to loosen over time, you should check the treadles and pedals after 3 to 5 operational hours for the first time, then every month.
- If a treadle loosens tighten it immediately. Remove the black cap from the crankshaft and retighten the screw underneath with a 14 mm socket spanner. The pedal may be retightened to the crankshaft with a 15 mm open-end spanner.

8.2 Cleaning

Sweat, dust and dirt can damage your exercise equipment even after a few weeks. Metal and aluminum surfaces may deteriorate when getting into contact with sweat. Therefore you should clean the equipment every day.

We recommend “Ecolab P3-steril” or “Scarabig” for cleaning. You can obtain these detergents at the following suppliers:

Ecolab Deutschland GmbH (www.ecolab.com)
Reisholzer Werftstraße 38-42 / Postfach 13 04 06 - D-40554 Düsseldorf

SCARAPHARM chem.-pharm. Produkte GmbH (www.scarapharm.de)
Wachmannstraße 86 - D-28209 Bremen

AConsider the following aspects for cleaning:
Make sure to unplug the machine before cleaning it!

- Clean your machine with a damp cloth, mild cleaning agent or soap and dry it with a soft cloth.
- Do not apply oil or grease to the external parts of the machine.
- Don’t use any alcohol-based cleaning agents, aggressive soaps, or bleaching and scouring agents: These products can attack the artificial leather and reduce its service life.
- Use aldehyde-free, alcohol-free surface disinfectants based on tensides or polyhexanide.

Cleaning the blood pressure cuff:
Before cleaning the blood pressure module disconnect the connectors at the control panel.

- Clean the blood pressure cuff with a disinfectant suitable for medical purposes. Be careful not to let water enter in the cuff bladder or the tube.
- Regularly clean the microphone with clean lukewarm water.
- Regularly remove the cuff bladder and the microphone (see following description). The cuff is machine washable (60°C). Let it dry in the open air.
Preparation for cleaning

1. Put the cuff in front of you and open the Velcro at the outer side of the cuff.

2. Carefully pull out the bladder.

3. Push the microphone slightly out of its guide without pinching it. Push it until the guide gets wider. Then carefully pull the microphone out of the guide. Never pull the cable.

Cleaning the SPO2 Clips:

Before cleaning the SPO2 module disconnect the connectors at the control panel.

⊗ Clean the sensor with a soft, damp cloth and a mild detergent. The manufacturer recommends Klenzyme by Steris Corporation.

⊗ Do not use aggressive disinfectants. Sensors can be damaged. The manufacturer recommends isopropanol (70%) or high level disinfection with CIDEX OPA by Johnson and Johnson Corporation.
Kapitel 9  Troubleshooting

9.1 Finding the Error ................................................................. 50
9 Troubleshooting

Despite the high quality of ERGO-FIT products malfunctions may occur. In this chapter you find troubleshooting information. If you suspect a technical malfunction do not operate the machine. If you can repair the machine yourself nevertheless inform us of the malfunction. This allows us to record the failure in the model's documentation file and to further improve the quality of our products.

For safety reasons, unplug the machine before work is carried out or the machine is opened!

9.1 Finding the Error

Malfunctions may have simple reasons but sometimes a faulty component is the problem. This chapter provides you with guidelines to resolve possible problems. If the recommendations listed are not successful, please contact our service department immediately. Our service team will be pleased to help you.

Please proceed as follows in case of failure:

The machine does not react (no signal when switching on, empty display)

⊗ Check the fuse box. A fuse may be defective or a circuit breaker may have switched off.
⊗ Did you use an extension cable or a multi-outlet power strip? Always connect your machine directly to the power socket.
⊗ Check the power socket. Plug in another electric device to check the socket.
⊗ Pull the power plug out of the socket and visually inspect the power supply cord.

An error message is displayed

⊗ Write down the information displayed in the error message.
⊗ Check if the error has occurred frequently. If so, when and how often?
⊗ Check if multiple electric devices were connected at the same time. If so, which?
⊗ Check if a button was pressed when the error message was displayed.
⊗ Check if the machine can be started by pressing the START button or if this is possible after complete switch off only.
⊗ If you were not present when the error message was displayed, ask the user what exactly happened.
⊗ Try to fix the error yourself (see: error messages) or contact the cardiowise service center.
Possible malfunction of the blood pressure or SPO2 module:

</tr>
</tbody>
</table>

Use the recommended protective distance for portable and mobile radio units near the machine, including the cables. To determine the distance use the equation that corresponds to the transmitter frequency.

The field strengths must be determined by an electromagnetic site survey and should be less than the compliance level.

Interference may occur in the vicinity of equipment marked with the following icon.
**Electromagnetic Interference Immunity**

The XRCISE STRESS ECHO MED is intended intended for use in the following environments. Please make sure to only use the product in appropriate environments.

| Magnetic filed for supply frequency (50/60 Hz) in compliance with IEC 61000-4-8 | 30 A/m | Magnetic fields of the supply frequency should comply with those of a business or hospital environment |
**Recommended Separation Distance Between Portable and Mobile HF Communication Equipment and cardiowise Devices**

The XRCISE STRESS ECHO MED is intended for use in electromagnetic environments with controlled HF disturbances. To prevent electromagnetic interference make sure to maintain the minimum distance between portable and mobile HF communication equipment and the product according to the output power of the communications equipment as indicated below.

<table>
<thead>
<tr>
<th>Nominal output of the transmitter / Watts</th>
<th>Separation distance according to frequency of transmitter (meters)</th>
<th>150 kHz to 80 MHz $d = 3,5/V_1 \sqrt{P}$</th>

</tbody>
</table>

For transmitters rated at a maximum nominal output power not listed above, the recommended separation distance $d$ in meters (m) can be estimated using the equation of the applicable column, where $P$ is the maximum nominal output power of the transmitter in Watts as stated by the transmitter manufacturer.

Please note:

- At 80 MHz and 800 MHz, the higher frequency range applies.
- These guidelines may not apply in all situations. Electromagnetic propagation is affected by absorption and reflection from structures, objects and people.

**A.5 Safety Regulations**

**A.5.1 Safety Instructions**

For user safety the VDE (Verband der Elektrotechnik e.V.) has issued special instructions for medical premises and electro-medical devices.

According to these instructions, devices with mains connection must be equipped not only with a reliable insulation of live parts but also with an additional protective measure to protect the user against the transfer of the supply voltage to touchable metal parts. For this purpose, VDE subdivides so-called protection classes.
Of the protection classes allowed for electro-medical devices, in most cases protection class I (protective measures with protective earth conductor) as well as protection class II (protective measures without protective earth conductor but double insulation) are used: In protection class I devices, metal casing parts are connected with the protective earth conductor of the grid through its earthing contact. In case of insulation failure, the upstream circuit breaker will close the circuit.

The cardiowise device of the XRCISE STRESS ECHO MED is classified as protection class I devices.

The use of electro-medical devices is restricted to safety-relevant innocuousness taking account of the state of the art, health and safety regulations and accident prevention. Protective measures must be taken to avoid both direct and indirect contact. Covers, coatings, insulation of energized parts in combination with protective measures using protective earth conductors (in compliance with protection class I), melting fuses, as well as the observation of distances between devices are all part of this.

For cardiowise machines the most suitable distance to be maintained is 1.5 meters. With this distance, two training devices cannot be connected conductively by a person and it is unlikely that users will receive an electric shock during workout.

The instructions in this chapter refer to the German safety model. These instructions may vary in other countries.
A.5.2 Mark of Conformity

The cardiowise XRCISE STRESS ECHO MED is manufactured in accordance with highest safety and quality standards and are designed for commercial use.

All standards and directives applied during the development are listed in the declarations of conformity which you can get on request.

On the machine’s type label you can find the information listed in the below:

![Type label diagram]

- CE mark
- Power supply
- Type B
- Fuses
- Contact protection: with finger
- Foreign matter protection: medium-sized objects (diameter greater than 2.5mm)
- Water protection: Water dripping vertically
- Electrical waste
- Please note user manual

A.5.3 Symbols

The symbols used for cardiowise machines comply with the IEC 417 and IEC 878 standards. The following symbols are used on the machine:

- Alternate current
- Protective earth conductor (in the machine)
- Potential equalization
- Grounded
- Serial number of the machine
- Order number
- Date of manufacture
- Manufacturer
Hazardous electrical voltage

Off (supply connection)

On (supply connection)

Type B classified

Protection class through housing (IP code)  (Contact protection: with finger
Foreign matter protection: medium-sized objects (diameter greater than 2.5mm)
Water protection: Water dripping vertically

Please note user manual

Electrical waste (Disposal of the device in regular clinic waste is prohibited.
For more information on disposal, please contact your authorized distributor or
the manufacturer)

CE marking with identification number of the notified body. The product meets
the fundamental requirements of the Medical Device Directive 93/42/EEC

The following symbols are used on the packaging:

Top side

Fragile

Keep dry

Do not roll

Note center of gravity

Allowable temperature range

Allowable relative humidity range

Allowable ambient pressure range
A.6 Error Margins

In compliance with DIN VDE 0750-238 the following error margins apply for XRCISE STRESS ECHO MED:

1. The read-out error for power (p) may not exceed ± 5% of the displayed value. It may not fall below ± 3W.
2. The read-out error for speed (n) is set to a maximum of ± 2 min⁻¹ above 40 min⁻¹.
3. The measurement device to assess the output calculated on the base of brake torque and rotational speed of the treadle ergometer must not exceed an error margin of 1%.

The following figure shows the characteristic curve of the brake torque control:

A.7 Warranty

2-year warranty (see general terms an conditions, point 8.1 guarantee „ERGO-FIT grants 2 years guarantee for its own products. In the first year the travel expenses and occurring working hours within Germany are borne in addition to the spare parts. In the second year only the spare parts. For merchandise the guarantee provisions of the respective manufacturer apply accordingly“)

The supplier shall be liable for defects of the supply, among them the lack of expressively assured properties, but excluding further claims as follows:

1. All those parts showing to be unserviceable or to be essentially restricted in their usability within a period of 24 months after delivery, by circumstances to be traceable prior to the transmission of risks - especially due to faulty design, bad quality of the material or faulty manufacture - shall be repaired or replaced, at the own discretion of the supplier. The decision if the fault may be repaired or should be replaced will be at the seller's discretion.

2. The limitation of the purchaser's right to claim for defects shall be 24 months after transfer of the object in every and each case.

3. No warranty is offered for damage that arises for the following reasons: inappropriate or improper use, faulty assembly or faulty startup carried out by the purchaser or a third party, natural wear, faulty or careless handling, inappropriate equipment or replacement materials, faulty construction works, chemical, electrochemical or electric influences, except in the event that they are due to the suppliers fault. Purchaser shall bear the expense and the risk of the delivery even if delivery freight paid has been agreed.

4. The supplier reserves the right of two reworks or replacements. Should these fail, the purchaser has the right of reduction or conversion within the framework of legal provisions. The seller will have a period of six weeks for reworks, beginning with the notice of defect.

5. Improper modifications or repairs carried out by the purchaser or a third party without prior permission of the supplier will void the warranty.

6. If goods are exported, warranty will be restricted to the availability of loose spare parts ex factory within the warranty period. Packaging costs, freight charges and labor will be at the expense of the purchaser. In case the purchaser demands on-site repair by a technician of the factory or another service center, the purchaser will bear the travelling expenses and labor costs.

7. All merchandise that has not been produced by the supplier is subject to legal Provisions.
Wear parts such as those listed below are excluded for warranty:

- Pedals
- Pedal straps
- Seat
- Head support
- Hip support
- Driving belt
- Adjusting Lever
- Fuses
- Sensor SPO2-module
- Cuff bloodpressure module
- Cabel bloodpressure module
- Microphone bloodpressure module

Improper maintenance will void the warranty!
A.8  Entry in Medical Devices Registry

In compliance with §11 section 7 and §7 of the regulation on the erection, operation, and use of medical devices („MPBetreibV“) as of June 29, 1998 (BGBl. 1. p. 1762), the person who carries out metrological controls must immediately record the measured values, the measuring method, as well as other evaluation results into the registry of medical devices. As during metrological control of your medical device the registry of medical devices was not available, we ask you to use the following data for your documentation.

Operator:

Warnings

Read the user manual carefully before you start.
Before starting the exercise please check the power supply cord.
Check the wiring to external devices prior to workout.
Always connect the equipment to the power supply before using it and only use it after a proper functional test.
Ensure that the power cords cannot be driven over.
Check whether all locking pins for the adjusting mechanisms and pads are locked before the patient uses the device.
The machine is only to be used on the instruction of a physician and / or a supervisor. The machine must not be used without the presence of a supervisor.
In case of nausea or dizziness, the patient has to stop training immediately and see a physician.
Persons who wear a cardiac pacemaker or have health problems consult a physician before using the machine.
Your patients have to wear only appropriate clothing and footwear during workout.
Advice your patient, not to take the feet off the pedals or jump from the machine during the training.
Only use the tilting mechanism with the adjustable feet locked.
Ensure that the tilting mechanism is only used with the hip support in place in order to avoid damage to health.
Ensure a sufficient safety clearance before using the tilting mechanism.
In order to avoid injuries, talk to the patient before adjusting the seat and maintain eye contact with the patient while adjusting the seat.
Don’t lean on the cockpit or on the device covers, and don’t perform any improper movements on the device.
Switch off the machine after the workout and disconnect it.
Children must not use the machine without supervision and must keep away from the machine and its moving parts.
Before every use, check the moving parts and the casing for damage. If the machine is damaged, have it repaired immediately.
Do not cover the ventilation louvers. This can cause the machine to overheat.
Don’t open any drives or controllers as this would void the warranty.
Repairs to energized parts may only be performed by a specialist using original spare parts.
Do not touch the USB port, RS232 port or audio port or the connection for blood pressure measurement or SPO2 measurement during the training.
When changing the fuse you should not touch the internal contacts of the fuse switch in the power plug.

Note: Do not exceed the maximum user weight of 200 kg.

Prevent improper use of the equipment.

Please also read any further safety instruction and warnings in this manual.

All safety instructions in this manual are based on many years of experience and self-conception.

These safety instruction must be visible at the cardio exercise machine!
All users must be informed of warnings and safety instructions.
The manufacturer will not be liable for personal injuries or property damage.
